

VIEW₁

Mobile Teleradiology for Telestroke

Every minute counts in assessing acute stroke patients. Time is often lost getting initial CT or MRI scans to the attending doctor. Saving this precious time requires a solution that delivers scans to the stroke physician immediately—anywhere, any time.

GCQ's VIEW1™ Mobile application delivers scans in near real-time from the hospital PACS system over today's cellular networks to an iPhone® in the physician's hand. With the image clarity to consult and make treatment decisions.

Treat acute stroke patients wherever they are. Treat acute stroke patients wherever you are.
